

The Ultimate Moon Shot

A Trip Into The Unknown

A sensitive **STEERING WHEEL** rotates the space ship. For a fast reverse, hit the **HYPERFLIP BUTTON** and blow targets out of the sky. The **WARP DRIVE BUTTON** controls the speed of the ship while the player depresses the **FIRE MISSILE BUTTON** to hit one of sixteen different targets, each having its own point value.

When the going gets real tough, push the **SHIELDS**

BUTTON for protection. Shoot to your heart's content while being totally protected from your attackers. But, use the shields sparingly or else you'll have to go to the reflecting base to

regenerate shield power. Each base is numbered and each will award you ten points for successful entry while increasing the game's difficulty at the same time.

STL	WING POINTS
1	10000000000
2	10000000000
3	10000000000
4	10000000000
5	10000000000
6	10000000000
7	10000000000
8	10000000000
9	10000000000
10	10000000000
11	10000000000
12	10000000000
13	10000000000
14	10000000000
15	10000000000
16	10000000000

After every tenth base, the mystery ship appears and gives you a bonus if destroyed.

Moon War is a one or two player game having dual controls. Of course, the game's top ten scores are visible for all to see.
